EDUCATION

McGill University

Bachelor of Science in Software Engineering

Montreal, QC

Expected 2028

- **Coursework:** Data Structures & Algorithms, Algorithms & Complexity, Software Systems, Computer Systems, Probability & Statistics

EXPERIENCE

Software Engineer Intern

Sep. 2026 – Dec. 2026

LevelOps

Montreal, QC

- Joining the team behind PDF to Order, a **Shopify** app that converts emailed purchase orders into draft orders
- Responsible for customer support, debugging the pipeline and integrations, and shipping fixes and features

Data Engineering & Analytics Intern

Jan. 2026 – June 2026

Transport Laberge

Montreal, QC

- Eliminated **10+ hrs/week** of manual imports by reverse-engineering an undocumented MIR database and merging **20M+ records** with **SharePoint** data into one warehouse through daily/weekly **Python** and **SQL** ETL jobs
- Targeted a **25% cut** in support and dispatch work by building an **AI voice agent** scoped for **70+ daily calls** that classifies **8+ intents**, answers recurring questions, and triggers **4 workflows** through **OpenAI** and **Vapi**
- Gave the **inbound dispatch team** a written record of every call by deploying a **Vercel API** (Vapi, **Supabase**) that emails a summary after each call, logging recurring questions used to improve the agent
- Gave the **General Manager, Directors of Technology and Dispatch**, and **logistics and supply teams** visibility into KPIs (FTFR, MTBF, TCO) by shipping **10+ Power BI dashboards** in Agile sprints

PROJECTS

Swap | *React, Vite, Node.js, Express, MongoDB, JWT, Gemini API*

July 2025 – Present

- Built a P2P exchange app for **20 currencies** by developing a REST API for auth, offers, swap requests, and an AI assistant through **React 19**, **Express 5**, **MongoDB Atlas**, and **JWT** auth
- Cut offer creation from **4 form fields** to **one sentence** in **English, French, or Spanish** through deterministic rules that settle **79%** of cases alone, calling the **Gemini API** only on ambiguity (**8-second** budget)
- Kept the parser and assistant at **100%** on **46 eval cases** by gating changes in **GitHub Actions** CI and revalidating every model response against the form's rules
- Prevented contact scraping by releasing emails only after an accept, through atomic server-side updates that auto-decline competing requests

Logbait | *Unity, C#*

Jan. 2026 – May 2026

- Shipped a browser-playable action roguelike to itch.io with a **team of 8** by owning the **core gameplay loop**: movement, combat, health/damage, and AI targeting for all **6 enemy types** through **Unity** and **C#**
- Supported **6 player abilities** with no changes to combat code by designing a modular ability system through reusable cooldown, VFX, and state components
- Kept fast fights readable under load by building a combat UI driven by combat-state events

Used Car Price Prediction | *Python, Pandas*

Aug. 2023 – July 2024

- Predicted used car prices with an **R-squared of about 0.80** by developing a **linear regression** model through **Python** and **Pandas**, evaluated with MSE and MAE
- Cut data error rates by **20%** by cleaning **50,000+ entries** through missing-value and outlier handling
- Built as part of Dawson College's AI Research and Development program

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, TypeScript, C#, SQL, R, Bash, HTML/CSS

Frameworks: React, Node.js, Express, Next.js, Mongoose, Unity, Bootstrap

Developer Tools: Git, GitHub Actions, Azure DevOps, Vercel, Render, Supabase, MongoDB Atlas, Power BI, Jupyter

Libraries: Pandas, NumPy, scikit-learn

Spoken Languages: English, French, Spanish
